

5-06/040.31 - Fabrique Nationale 303 (FN 303) Less Lethal Platform

FN 303 less lethal platforms are less lethal weapons launchers that may be used in a wide variety of tactical applications encountered within law enforcement. They may be used as an area treatment device to deploy chemical agents upon actively resisting suspects or in a focused, direct fire, kinetic capacity on assaultive/high risk suspects. The intended target zone for the FN Launcher is low center mass, unless the situation dictates otherwise.

FN 303 platforms shall not be altered or modified in any way without the expressed consent of the sergeant in charge of the Tactics and Survival (TAS) Unit. Only approved rounds shall be used in this less lethal platform. All repairs to the FN 303 platform shall be made by a unit level or above, certified armorer, or FN factory armorer.

Only Department members who are current with their certification and training standards for this less lethal weapons platform may deploy it.
