

## 3-07/120.15 - Messages - Types, Transmission, and Reception Of

JDIC is the state designated county control agency for the transmission of crime-related or emergency point-to-point messages and broadcasts as well as computer data file access for Sheriff's facilities and other Los Angeles County justice agencies.

Appropriate message types:

- Crime or emergency bulletins directed to agencies participating in the JDIC network;
- Crime or emergency broadcasts originating within the JDIC network for transmittal to in-county, state, and federal agencies or to out-of-county agencies via CLETS and out-of-state agencies via NLETS;
- Crime or emergency broadcasts originating from law enforcement agencies within the county; and
- Tactical alerts.

Sheriff's Department administrative broadcasts, Department orders, notices, and announcements shall only be disseminated using Departmental electronic mail. A global electronic mail folder in the Public Folders section of Outlook has been created with a search capability which can be queried for historical content.

A JDIC user anywhere on the network can transmit and receive messages to or from:

- Any participating station, bureau, or facility;
  - Any law enforcement agency participating in the JDIC network;
  - Any in-county local, state, or federal law enforcement or criminal justice agency participating in the California Law Enforcement Telecommunications System (CLETS) network;
  - Any out-of-state criminal justice agency participating in the National Law Enforcement Telecommunications System (NLETS); and
  - With proper security, any JDIC terminal can access:
    - Department of Motor Vehicles' data files;
    - Department of Justice (DOJ) data files;
    - FBI National Crime Information Center (NCIC) data files; and
    - County Internal Services Department's Justice Computer Center (JCC) data file.
