### PURPOSE:

The purpose of this order is to establish procedures regarding the cleaning, inspection, and sterilization of waist chains and restraint devices.

### SCOPE OF ORDER:

Due to the inherent danger associated with contaminated waist chains and other restraint devices, routine inspections are necessary to ensure operability, maintenance, and cleanliness.

### ORDER:

Effective immediately, jail personnel will ensure the cleaning/sanitization of waist chains and other restraints are conducted using an approved anti-bacterial solution which states it kills multiple pathogens, including Methicillin Resistant Staphylococcus Aureus (MRSA), for affectability.

The waist chains or restraints will be cleaned and sanitized using Citrus-DC cleaner manufactured by Champion. The Citrus-DC solution will be mixed using a plastic five (5) gallon bucket at a ratio of 8:1 ounces per gallon. The material being cleaned will soak for a minimum of ten (10) minutes. The items will then be air

dried in the janitor's closet on a hook and placed back in storage.

Due to the infrequent use of waist chains at Cerritos Station, jail personnel shall clean/sanitize waist chains and other restraint devices on the same day following their use or, at a minimum, on a monthly basis. The cleaning/sterilization and inspection of waist-chains and restraint devices shall be documented in an approved log and maintained for a minimum of two (2) years per CDM 4-13/000.00 Retention of Records. Due to the infrequency use of the wait chains at Cerritos Station, they are cleaned and individually sealed in a bag and labeled with the date of cleaning. The process is repeated whenever the waist chains are used. The log will be maintained at the jailer's desk.
